MAR Systems Welcomes New CEO

(SOLON, Ohio) March 11, 2009 – MAR Systems LLC, a Cleveland-based water purification company, welcomed Tony Lammers as its new chief executive officer. He began his position March 02.

Lammers brings more than 20 years of executive experience to MAR Systems with direct knowledge in managing day-to-day activities of consumer products, marketing, manufacturing and distribution operations. Lammers is returning to the United States from China, where he served as vice president of Office Solutions and Hobby and Craft Divisions for RT Sourcing Company since 2007.

“It is great to be back in Northeast Ohio and working for such an innovative company,” said Lammers, who from 2001 to 2007, served as president and CEO of InnoDesk Inc., a Cleveland-based, start-up consumer products company. “Having lived in China for two years, I understand how precious and elusive a resource clean water can be.”

MAR Systems is on the cusp of commercializing its patented technology to remove hazardous contaminants from water, such as mercury and arsenic, in a faster, cheaper and greener way. MAR Systems chose Lammers as its new CEO based on his experience in start-up, high-growth and consumer product companies.

“Tony comes to MAR with a tremendous amount of experience bringing products and innovative thinking to the global market,” said Claude Kennard, MAR Founder and inventor of the technology, who holds several co-patents with the United States EPA on the media to remove contaminants from water. “He will guide us through his leadership and experience as our company continues to grow in 2009 and beyond.”

Jumpstart Inc., which helps accelerate the growth of innovative early-stage ideas and business into venture-ready companies, also shared in the excitement of Lammers’ hiring.

“We are excited to welcome Tony to the MAR team because he is a smart, internationally-oriented, and customer-focused entrepreneur,” said Becca Braun, chief operating officer, Jumpstart Inc, which was an early stage investor in MAR. “He brings great experience driving revenue increases, raising capital and growing companies.”

Lammers received his MBA from the Weatherhead School of Management, Case Western Reserve University and a holds bachelor’s in economics from the University of Richmond. Lammers, and his wife, Peggy, currently reside in Gates Mills with their three children.

ABOUT MAR SYSTEMS

MAR Systems, LLC is a privately owned, Ohio-based company that was established in 2005. As a result of the increasing presence of hazardous metal contaminants found in water, MAR Systems has developed patented, proprietary processes that remove arsenic, mercury and other heavy metals from industrial water streams through its Sorbster™ media. The Sorbster™ media works an estimated 90 percent faster than other types of media, needs no supplemental chemicals and is completely recyclable. MAR Systems' process establishes a new standard in effectiveness, cost and simplicity. For more information, please visit www.marsystemslc.com.
