Please share this e-newsletter with your contacts, and feel free to contact us at info@marsystemslc.com.

MAR Systems Successfully Closes Series B Round of Funding

Cleveland-based Early Stage Partners vital in round of funding that provides \$1.5 million to clean water technology

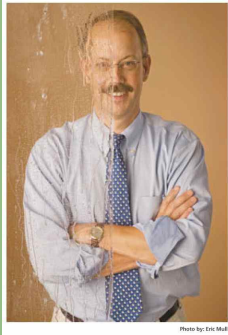

(OLON, Ohio) October 30, 2009 - MAR Systems is pleased to announce the initial closing of its new \$1.5 million Series B round of funding led by Early Stage Partners, a Northeast Ohio venture capital firm, and a number of its existing investors. The funding allows MAR to continue product development and commercialization of its Sorbster™ media that removes mercury, arsenic and other heavy metals from water.

"We're on the verge of changing the water treatment industry with our media," said Tony Lammers, chief executive officer, MAR Systems. "Not only is MAR excited to continue commercialization on its latest media, but to have a partner in Northeast Ohio that understands what we are accomplishing is extremely rewarding."

"Early Stage Partners is pleased to be able to support MAR Systems by leading this round of funding," said Richard Stuebi, managing director, Early Stage Partners. "MAR Systems' new and innovative technology relating to the removal of mercury contamination in water streams could have an extremely positive impact not just here in Northeast Ohio or the United States, but globally."

MAR Systems Brings New Media to Market for Mercury Removal

Sorbster™ media is the FASTER, CHEAPER,
GREENER water treatment solution.

If you're looking for a media that addresses
mercury removal, MAR Systems' Sorbster Hg is
your answer. We've developed patented,
proprietary processes that remove metal
contaminants from water and industrial fluid waste
streams that is multiple orders of magnitude faster
than our competition. Sorbster media technology
chemisorbs the contaminants creating a non-hazardous disposal option, and we
have demonstrated success that is 20,000 times faster than current technologies.

Our media will help you address the following:

- Legacy Issues
- Compliance Concerns
- Complicated Contamination Issues
