

MAR Systems, LLC has developed a patented, proprietary process that removes hazardous contaminants from water and industrial fluid waste streams through its Sorbster™ brand of products.

The presence of metal contaminants from natural and man-made sources is increasing quickly and globally, and **Sorbster™ media is the FASTER, CHEAPER, GREENER solution to removing arsenic, mercury and other heavy metals from water.**

Faster. Cheaper. Greener.

MAR Systems' process establishes a new standard in effectiveness, cost and simplicity in meeting the stringent demands of EPA drinking water standards announced in January, 2006.

Sorbster™ media is a product based on a patented, proprietary chemistry. The result is a media that works to encapsulate arsenic, mercury and other heavy metals found in water.

Looking for a Faster, Cheaper, Greener water treatment solution?

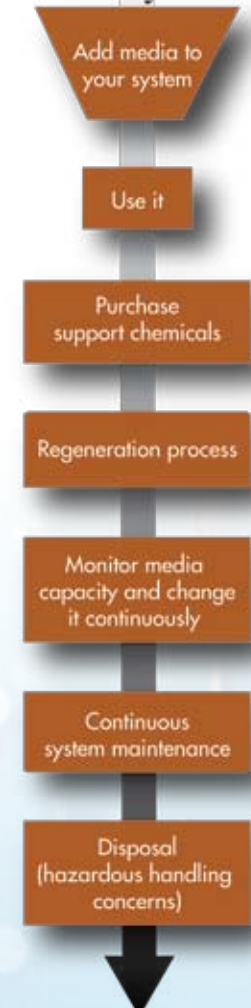

When **Sorbster™** media comes in contact with arsenic, mercury and other heavy metals, it adsorbs the contaminants within seconds. This reaction time allows you to have a small equipment profile or use your current equipment to achieve longer media life. **Most importantly, it lets you treat the problem at the source.**

Sorbster™ media has an estimated contact time that is **90%** faster than other current media in the market place and does not require back flushing to remove heavy metals.

Sorbster™ media uses less media than current water treatment systems, and no supplemental chemicals or regeneration is needed when you use **Sorbster™** media. Additionally, **Sorbster™** media creates a longer life cycle for your current water treatment system.

Sorbster™ media can be completely recycled unlike iron oxide and other current media in the market place. MAR Systems continues to create products that keep your treatment facility complying with EPA standards in the most cost-effective and eco-friendly ways.
